TI Interaction of thiopurine derivatives with the mercury electrode

AB The interaction of thiopurine derivs. with the mercury electrode was studied at various pH values by using d.c. polarog., controlled-potential coulometry (CPC) and cyclic voltammetry (CV). The ability of thiopurine derivs. to yield anodic polarog. current arising from the formation of a sparingly soluble mercury compds. is discussed. Parameters affecting the anodic polarog. current were studied. The CV behavior indicates a thin film due to. . .
